Mews Collection

The new workplace landscape has shifted to habitable spaces with high levels of function and flexibility. But we need more. Spaces that not only work well but make us feel good too. Positive spaces to focus, connect, collaborate and feel inspired.

# Mews

Positive Spaces

Exploring the space around Mews is just as rewarding as Mews itself. We took the negative space, which is the space between, and surrounding an object, to form another space. The Mews pods can be the focus of the space, but the negative space can be just as important creating ideal spaces for collaborations and bonding with others. Mews removes the negative and makes positive spaces.

# Mews

Focus

A quiet space designed for visual and acoustic privacy. Lighting modes created for video conferencing and prolonged pieces of work with ventilation that maintains a comfortable temperature and quality of air. Available in three sizes Focus, Brief and Dial to fit the task at hand.

## Private Spaces - Design for Work and to Communicate

### Lighting Design

We have all become very aware of how we look on camera, from the first moment we log in to our video call to the moment we catch a glimpse of our faces on the attendee screen. Having that human connection is vital to gauge response and better understand the conversation. Creating a flattering environment to be seen is paramount, boosting confidence and projecting the right message for your brand. There are several elements to control and create a complimentary visual for video conferencing: lighting, color, shape, and texture.

### Video Conferencing

The VC lighting system creates loop lighting with the light source positioned slightly higher than eye level and about 30-45 degrees from the camera to bounce light off the back wall and distribute a defused, soft light evenly across the face. The rear downlight against the back wall provides a halo effect, a flattering contrast around the head.

Whilst your Focus pod can be upholstered in any color, on the desk wall, we recommend using natural tones that reflect a flattering color across the face and the introduction of subtle texture can introduce interest and create visual privacy too.

# Mews

Connect

A meeting space designed for visual and acoustic privacy. Controllable lighting creates a softer space to focus and share ideas. Ventilation that maintains comfortable temperature and quality of air over longer periods.

## Private space to think and meet

### Air Quality & Temperature

Our new ventilation system allows fresh air to be drawn in - hot air extracted out. All pods are also set to deliver 12 air changes per hour as a 'nominal' setting. Providing quality air flow and a stimulating atmosphere whilst maintaining the ambient temperature.

### Acoustics

Mews offers high levels of acoustic insulation, achieved through innovative sound absorbent wall panels -

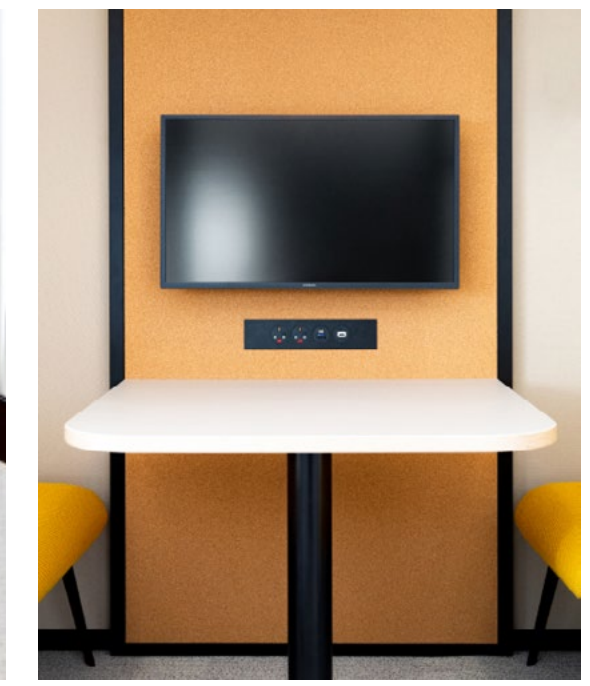

disconnecting you from the wider environment to focus, and providing acoustic privacy for calls.

### Connectivity

Power to recharge USB A+C with HDMI connectivity to a screen - recommended size 32".

### Tables

Standard tables have rounded corners to maximize on space.

## Social Spaces to Connect - Open

An informal meeting space designed for keeping in touch with your space and people around you. The slatted ceiling creates an open well lit space with a different level of connection.

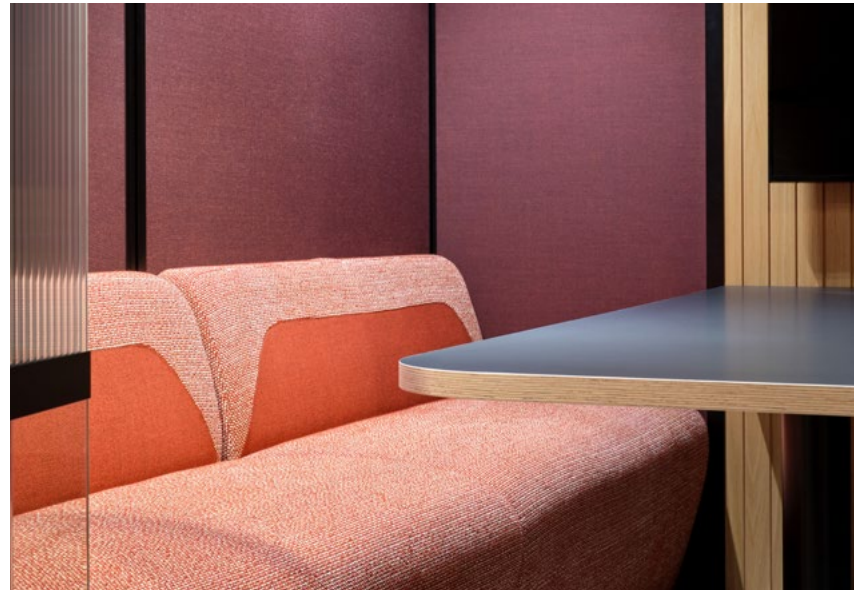

## Connect XL

Using the Mews grid, XL is a double depth pod that enables bigger team huddles or a spacious meeting space to keep in touch with the people around you. Available in a configuration suitable for disability access.

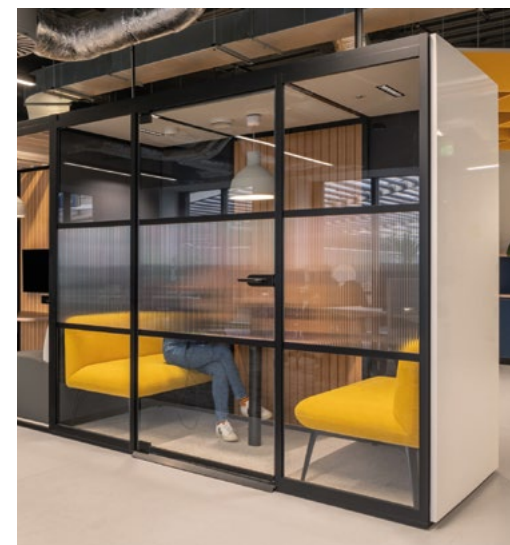

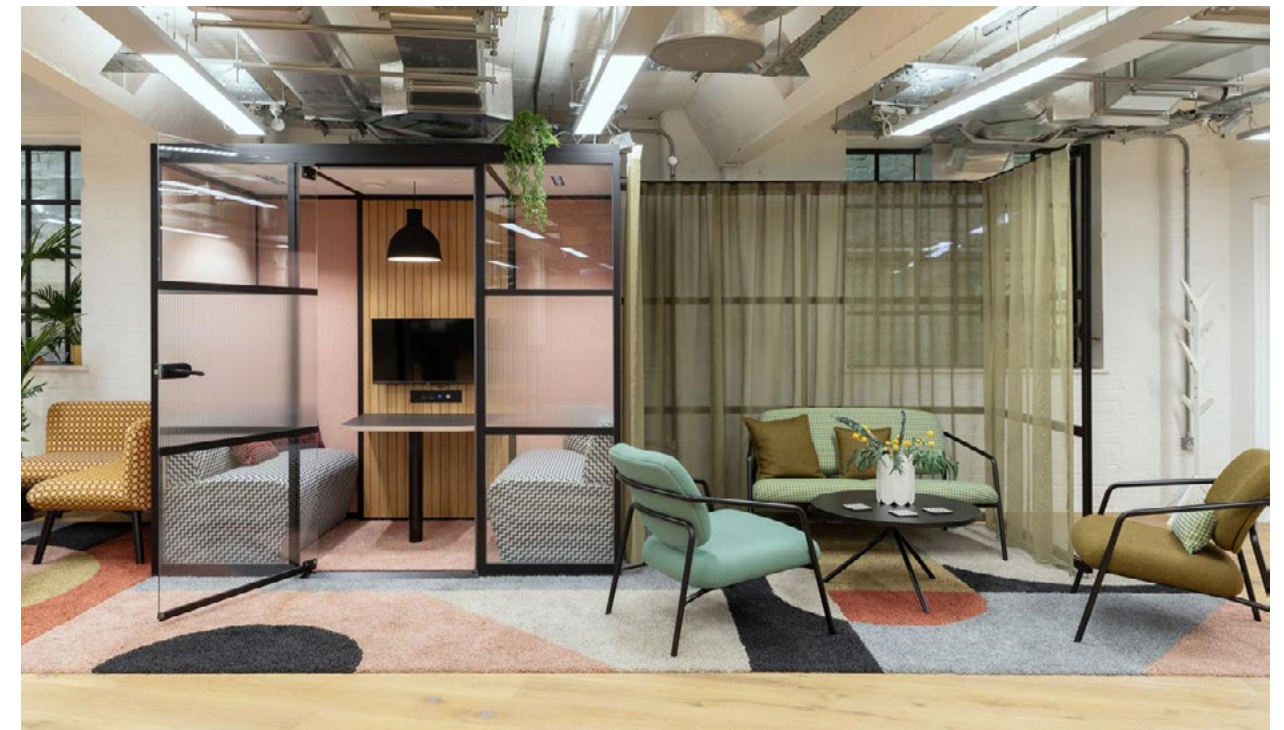

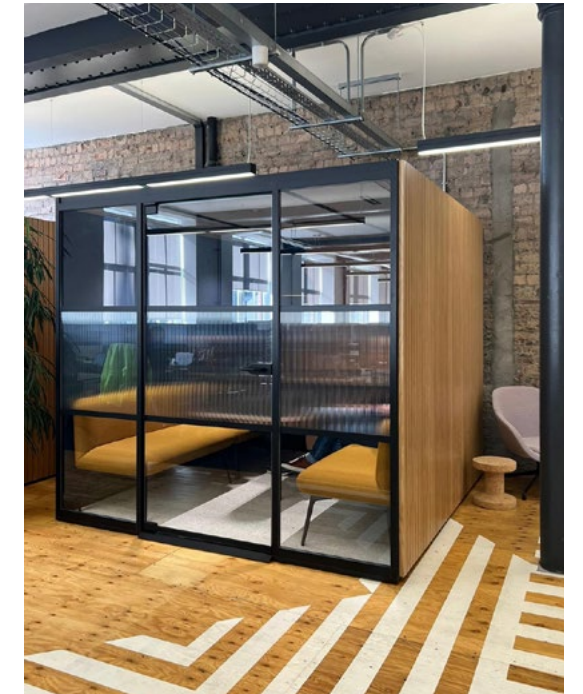

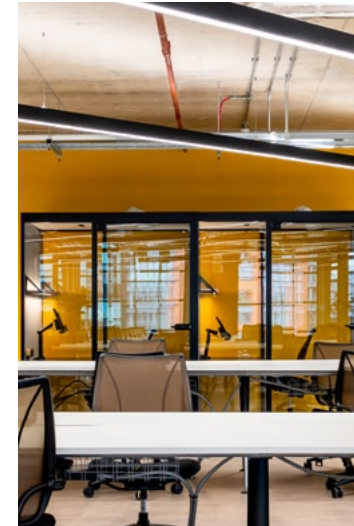

# Mews

Collaborate

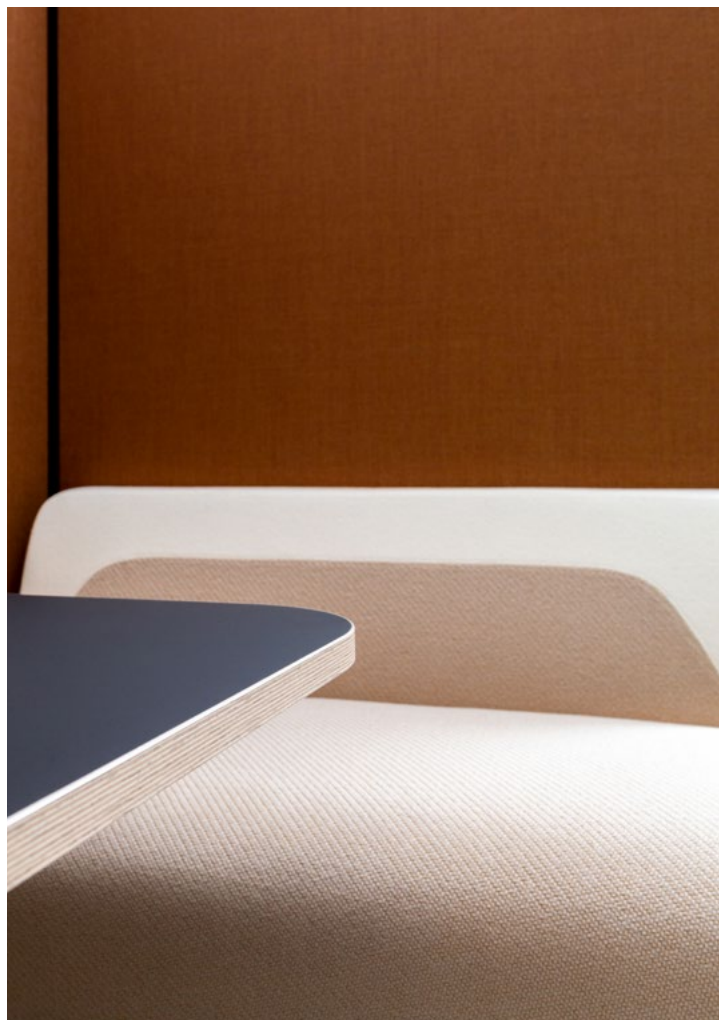

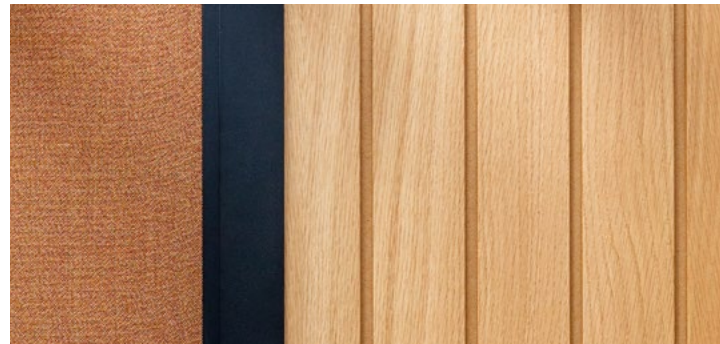

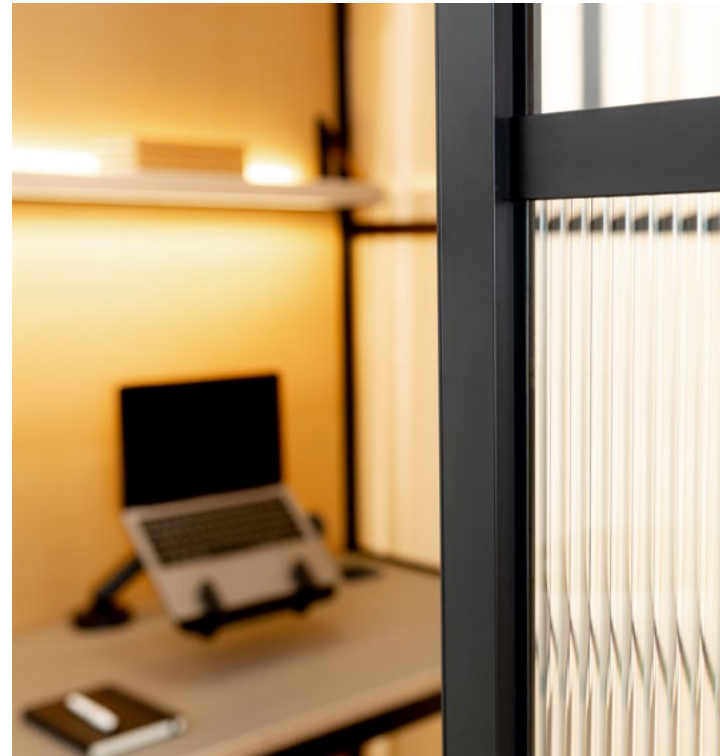

The space around the pods delineated by curtains on the Mews grid system, creates spaces perfect for collaboration and informal lounge settings.

# Mews

On Location

The Mews Pod Projects redefines the workspace, offering modular pod systems that cater to the evolving needs of modern environments. Whether fostering focused work sessions, facilitating brainstorming sessions, or providing secluded meeting areas, our Mews Pods are transforming spaces into a hubs of productivity and innovation.
